

CAPITA

Electronic Security Systems

Developing integrated strategies and design solutions to deter, delay and detect attacks against people, property and infrastructure

We | Listen Create Deliver

Security Systems

People and facilities are exposed to an ever-increasing range of security threats, from minor crimes to extremist attacks. Professionally designed electronic security systems provide an invaluable means of securing buildings, infrastructure and the public realm. These systems automatically enforce security policies, provide early warning of a security breach, allow remote monitoring and control of a security incident, and provide a means of reviewing evidence after an event. It also provides a unique platform for a range of value-added, non-security systems.

Capita Security Consultancy's specialists and engineers have a wealth of experience in developing integrated security system solutions across a wide range of industry sectors.

Capita Security Consultancy

Operational Requirements

Capture the client's requirements, liaise with stakeholders and authorities, and develop comprehensive operation requirements.

Technology Strategies

Develop coherent technology strategies to support and enhance security and organisational objectives. Undertake detailed surveys of existing installations and develop fully costed technology refresh programmes and maintenance regimes. Advise on emerging technologies, smart building schemes and smart city applications.

Systems Design

Develop concept and detailed designs of security and communication systems, including scanning and screening equipment, pedestrian and vehicle access control, video surveillance, security and emergency alarms, custodial systems, perimeter protection, mobile and wireless communication, public address systems, lighting schemes, control and monitoring systems and security control rooms.

System Integration

Concept and detailed design of integrated security systems, and integration with non-security systems. Design common or bespoke communication networks, including structured cabling systems, wireless networks and mobile signal networks.

Testing and Commissioning

Monitor installation works and conduct comprehensive testing and validation of the complete installation against operational requirements, regulatory and planning conditions, and industry best practice.
