

Building and Perimeter Protection

Developing innovative strategies and design solutions to protect property and infrastructure against physical intrusion and weapons attacks

Building and Perimeter Protection

Organisations are exposed to a range of physical security threats, from minor crimes to extremist attacks. Buildings and site perimeters are vulnerable to physical intrusion which poses a variety of risks to people, physical assets, operations and information assets.

To reduce the impact of an attack an integrated multidisciplinary approach is required, incorporating a combination of security measures to mitigate theft, damage or sabotage of assets and to protect staff, visitors and public from physical harm.

Capita Security Consultancy's specialists and engineers have a wealth of experience in developing building and perimeter protection solutions across a wide range of sectors.

Capita Security Consultancy

Blast Mitigation

Undertake blast loads prediction, effects analysis and vulnerability assessments, and provide design and advisory services to develop blast mitigation solutions.

Hostile Vehicle Mitigation (HVM)

Strategic advice, site and technical assessments, and development of operational requirements (OR). Scheme designs to protect people, property and infrastructure from various types of hostile vehicle attacks.

Building Protection

Design and advisory services to secure building perimeters against undetected compromise, physical intrusion and firearms as well as stand-off weapons attacks.

Perimeter Protection

Design and advisory services to secure site perimeters against unauthorised entry by vehicles or pedestrians using a combination of electronic security systems and physical perimeter barriers.

CBRN Mitigation

Undertake vulnerability assessments of facilities, provide mitigation advice and develop incident response and business continuity plans to mitigate the impacts of potential CBRN incidences.
