

## Security Risk Assessment

Identifying threats, analysing risks and developing comprehensive risk mitigation strategies to protect people, property and infrastructure

# Vulnerabilities

Organisations and people are exposed to an ever-evolving range of security threats, from low level crime to in-house sabotage or even large scale catastrophic attacks. Developing an appropriate security response requires a thorough understanding of the particular threats to which a scheme is exposed, the specific vulnerabilities of the facility and the nature of an organisation's normal and emergency operations. A structured security threat and risk assessment considers all factors affecting the risk profile of the organisation or facility and provide a firm basis for decision making and resource allocation.

Capita Security Consultancy's specialists have a wealth of experience in assessing security threats and risks and in developing holistic solutions to reduce risk to a level appropriate to the security profile and the risk appetite of the client.

# Capita Security Consultancy

## Stakeholder Engagement

Interview key decision-makers, security managers and frontline staff to establish priorities and identify issues. Facilitate early engagements with the client's internal and external stakeholders and maintain effective communication with the client and the stakeholder body throughout the threat and risk assessment process. Liaise with security authorities, governing bodies and local authorities to facilitate approvals and authorisations where required.

## Surveys and Reviews

Undertake detailed site surveys of existing security installations, observe daily operations and review policies and operating procedures to identify potential vulnerabilities as well as effective mitigation measures already in place.

## Threat Analysis

Analyse the global and local threat landscape and identify potential threats relevant to the scheme.

## Risk Assessment

Undertake a thorough assessment of particular threats relevant to the scheme, the key assets to be protected and vulnerabilities and strengths of the existing scheme and operational measures. Develop a comprehensive schedule of prioritised risks and identify appropriate risk treatment and mitigation measures against each risk.

## Risk Mitigation

Develop holistic and fully costed security risk mitigation plans, security strategies and masterplans. Produce detailed security incidence response plans and advise on recovery operations and business continuity.
